

CHIRAG VASAVA

Software Engineer — Full-Stack, AI/LLM Applications & Cloud Infrastructure

Vadodara, Gujarat | +91 9875115061 | v.chira.007@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#) | [LeetCode](#)

PROFESSIONAL SUMMARY

Computer Science Engineering student and full-stack Software Engineer with hands-on experience spanning web application development, AI/LLM integration, cloud infrastructure, and machine learning fundamentals. Has independently designed, built, tested, and deployed multiple production-grade applications end-to-end — from database design and backend APIs to CI/CD automation and cloud provisioning — with a track record of shipping real, publicly deployed software across several domains.

EDUCATION

B.E. in Computer Science and Engineering

Maharaja Sayajirao University of Baroda | 2024 – 2027 | CGPA: 6.53 (ongoing)

Diploma in Information Technology

Parul University | 2021 – 2024 | CGPA: 7.90

Secondary School Certificate (SSC)

Sardar Vinay Mandir Vidhyalaya, Vadodara (GSEB) | 2021 | Percentile: 91.29

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend & APIs: Node.js, Express.js, FastAPI (Python), RESTful APIs, JWT Authentication, Razorpay

Databases & ORMs: PostgreSQL, MySQL, MongoDB, SQLite, Prisma ORM, SQLAlchemy, JDBC, Redis, Appwrite Database

AI & LLM Integration: Google Gemini API, LLM API Integration, Prompt Engineering

Machine Learning & Data: Machine Learning, Data Preprocessing, Model Evaluation, NumPy, Pandas, Scikit-learn

Testing & QA: PyTest, Playwright, Postman, Python AST

Cloud & DevOps: AWS (EC2, IAM, SSM, S3, CloudWatch, ALB), Terraform (IaC), Docker, Docker Compose, Linux, Shell/Bash, Git, GitHub, GitHub Actions, CI/CD, Render, Vercel

AI-Assisted Dev Tools: Claude, Antigravity IDE

PROJECTS

GramSaarthi AI – AI-Powered Rural Business Advisory Platform

Next.js, TypeScript, Terraform, AWS EC2, Docker, Caddy, Google Gemini API | [GitHub](#) | [Live](#)

- Architected a deterministic TypeScript financial engine (loan eligibility, scheme routing, amortization) fully decoupled from a Gemini-powered generative advisory layer, keeping numeric outputs 100% auditable while retaining conversational AI guidance
- Provisioned AWS infrastructure with Terraform (VPC, Security Groups, Elastic IP, dynamic AMI lookup) and containerized the app with a multi-stage Docker build behind a Caddy reverse proxy for automated HTTPS
- Configured AWS IAM/SSM, CloudWatch CPU alarms, and S3 versioned backups; implemented GitHub Actions CI/CD with type checks, tests, Terraform validation, and production health verification
- Built a multilingual (English/Hindi/Gujarati) Gemini-powered chat assistant with domain guardrails and achieved 100/95/100/100 Lighthouse scores on the live production deployment

TestForge AI – AI-Powered Test Automation Platform

Python, FastAPI, Google Gemini API, PyTest, Playwright, GitHub Actions | [GitHub](#) | [Live](#)

- Built an AI-powered testing platform that parses source code via Python's native AST parser and auto-generates PyTest test suites, eliminating manual test-authoring effort
- Integrated Google Gemini through a FastAPI backend to generate targeted edge-case assertions and parameterized Playwright scripts from plain-English steps, using parsed AST structure as prompt context

- Designed a CI/CD quality gate with GitHub Actions that computes a weighted risk score (coverage gap, complexity, commit frequency) and posts automated analysis comments on pull requests

UniNest AI – Campus Recruitment Operating System

TypeScript, Node.js, Express.js, Google Gemini API, PostgreSQL, Prisma ORM, AWS EC2 | [GitHub](#) | [Live](#)

- Built a full-stack recruitment platform integrating a Gemini-powered ATS engine that scores resumes against job descriptions, returning a verdict, strengths, skill gaps, and matched keywords with a heuristic fallback
- Designed a PostgreSQL schema with Prisma ORM and implemented JWT authentication with role-based access control across Student, Company, and University roles
- Deployed a Node.js/Express.js backend to an AWS EC2 Ubuntu instance using PM2 for production process management and Security Groups for network access control

DayFlow – Human Resource Management System

MongoDB, Express.js, React, Node.js, JWT, bcrypt, Render | [GitHub](#) | [Live](#)

- Developed a full-featured HRMS with auto-generated Employee ID system, role-based JWT authentication (Admin, HR, Employee), and forced password change on first login
- Engineered an interactive attendance calendar with daily check-in/out, leave approval workflows, and a payroll engine with gross/net salary breakdown and deduction tracking
- Delivered 100/100 Desktop and 100/100 Mobile Lighthouse Performance with 0 ms Total Blocking Time and 100/100 Accessibility

ACHIEVEMENTS

Hack-A-Throne 2025 – MSU Baroda (Team Leader)

- Led a team to design and ship an AI-powered Event Management Portal within a 32-hour hackathon window
- Directed cross-functional collaboration under time pressure, delivering multi-role dashboards and AI-based recommendations

Odoo × GCET Hackathon 2026

- Advanced to the offline final round with RentFlow, an ERP-style rental platform
- Implemented quotation management, order lifecycle, Razorpay payments, and PDF invoice generation
